Professional Summary

Software Engineer specializing in full-stack and AI-driven applications, with experience building production systems using Node.js, TypeScript, React.js, and LLM frameworks. Skilled in agentic workflows, RAG, asynchronous processing, and human-in-the-loop systems, with strong foundations in DSA, DBMS, and Operating Systems.

Education

Shri G.S. Institute of Technology and Science, Indore

2022 – 2026

Bachelor of Technology in Electrical Engineering

Experience

Dice Enterprises

Jan 2026 – Present

Software Development Engineer Intern | React.js, Redux, Axios, MUI, Node.js, TypeScript

Pune, India

- Engineered a Node.js/TypeScript orchestration layer for an asynchronous 8-stage AP workflow (OCR → categorization → PO/GRN lookup → TDS → four-way match), reducing exception-review time by **55%** and achieving straight-through processing through stage-transition APIs, confidence gates, retry handling, and human-review fallbacks.
- Developed multi-agent invoice-processing services in Node.js and TypeScript, processing **1.2K+ invoices/month** with **~90%** post-review extraction usability by normalizing OCR, category, service, and TDS outputs, propagating shared traceIds, and exposing REST APIs for retries and vendor-resolution exceptions.
- Built an email-to-invoice event-processing workflow for enterprise clients including **Yes Bank**, improving invoice conversion by **38%** across **800+ mailbox events/week** by implementing Node.js/TypeScript APIs for **event lifecycle management**, agent reruns, plant-based filtering, review-queue routing, and rejection audit trails.
- Implemented PO/GRN/invoice reconciliation contracts for **four-way matching**, supporting **500+ daily finance users** across **4 enterprise AP workflows** by designing TypeScript data models for field-level source values, confidence scores, discrepancies, UOM conversions, and manual overrides, surfaced through a React review console.
- Designed tenant-aware configuration APIs for **AI-assisted AP features**, reducing exception-handling latency by using Node.js and TypeScript to manage runtime controls for LLM-based UOM conversion, similarity-based PO tagging, **SAP synchronization**, and AI Automation V2.

PixelTech

May 2025 – Aug 2025

Software Development Engineer Intern

Indore, India

- Built scalable React.js UI component libraries, reducing frontend code duplication by **20%** and accelerating development velocity, by engineering modular component abstractions and reusable design system patterns.
- Optimized asynchronous state synchronization and data fetching across client applications, improving UI rendering latency by **15%**, by integrating TanStack Query and Redux Toolkit with automated caching strategies.
- Resolved production bottlenecks and UI performance issues across SaaS dashboards, reducing application error rates by **28%**, by refactoring re-render loops and aligning REST API contracts.

Projects

DevAI Copilot

[GitHub](#)

TypeScript, Node.js, LangGraph, LangChain, Redis, Vector Search, Gemini API, Ollama

- Engineered a modular AI developer CLI copilot using **LangGraph** for multi-step reasoning and agent orchestration, automating approximately **40%** of routine codebase analysis tasks.
- Designed a production-grade **multi-agent architecture** (Manager, ReAct, RAG, File Explorer) that improved dynamic task routing efficiency and reduced manual debugging time by **5+ hours per week**.
- Implemented **Retrieval-Augmented Generation (RAG)** with vector-based retrieval and custom chunking strategies, boosting context retrieval accuracy using Redis vector search and top-*k* document retrieval.
- Integrated filesystem and Git tooling with **Human-in-the-Loop safety controls**, successfully gating **100% of sensitive operations** with zero unauthorized execution incidents.
- Built hybrid LLM execution pipelines using **Gemini API** and local **Ollama** models, reducing average inference cost by **30%** and improving Time to First Token (TTFT) latency by **150ms**.

Skills

Languages: JavaScript (ES6+), TypeScript, Python, Java, C

AI & ML: Agentic AI, Multi-Agent Systems, RAG, LangGraph, LangChain, Prompt Engineering, Vector Databases, LangSmith

Frontend: React.js, Next.js, React Native, Tailwind CSS, Redux Toolkit, TanStack Query

Backend: Node.js, Express.js, REST APIs, System Design, JWT Auth

Databases: MongoDB, Redis, SQL

Core CS: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP

Tools & Platforms: Git, Docker, Postman, Cloudinary, Cursor, VS Code

Achievements & Leadership

- Solved **300+** problems on [LeetCode](#), strengthening core Data Structures, Algorithms, and algorithmic problem-solving capabilities.
- Served as **Lead Web Developer / Chief Design Officer, E-Cell SGSITS**, building and maintaining official web portals for [E-Cell SGSITS](#) and E-Summit'24, while collaborating with cross-functional teams to engage **30+ startups** and **50+ investors/incubators**.
